

WE ARE REALLY PREPARED

Product Brochure

—— An expert in ODM/OEM solutions focused on the research, development, and intelligent manufacturing of mid to high-end bicycle wheelsets.

Core Strengths

- Full-link Technology Autonomy.
- Flexible Manufacturing Capability.
- Supported by a team of industry veterans.

Service Value and Vision

- Zero threshold cooperation.
- Brand Empowerment.
- Cost Optimization.

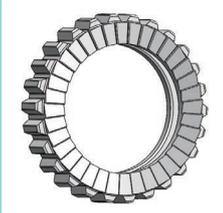

Mission and Vision

- Innovation without Boundaries.
- Continuous Iteration of Material Technology and Intelligent Manufacturing Systems.
- The Driving Force Behind the Invisible Champion of the Global Cycling Industry.

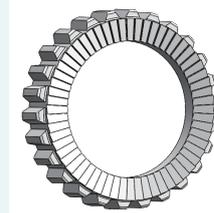

We insist on material science innovation as the core, and our unique RATCHET SYSTEM 36/60 system performs exceptionally well on climbs and sprints.

RATCHET 36

The RATCHET 36 system ratchet has 36 teeth. A spring actuates the loosening disc to provide a 10 degree bite angle with a 0.73 pitch stroke, and precision machining of the 5 shafts ensures precise matching tolerances, combined with the properties of aluminum and iron to effectively reduce weight and ensure strength.

RATCHET 60

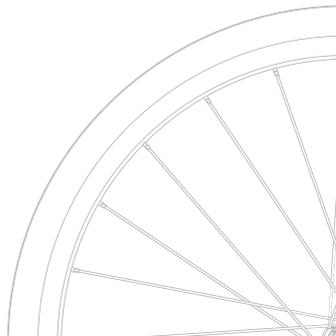

The Ratchet 60 system has 60 teeth on the ratchet wheel. A spring-loaded loosening disk provides 6.03 degrees of faster and more precise biting angle over a 0.5 actuating stroke. Precision 5-axis machining ensures exacting fit tolerances, creating a faster, more reliable and precise biting and pedaling experience specifically designed for the Gravel Bike.

We also have an exclusive patented carton design, portable “luggage”, easy to access and reusable. Made of high-quality materials that are both environmentally friendly and ensure that the wheelset can be transported without worrying about damage, and easy to disassemble, WARP wheelsets make your ride more efficient and reliable, helping you to handle every journey.

COLORFUL YOUR LIFE - - - - - P17

A cyclist is riding a road bike on a winding asphalt road that curves through a mountainous landscape. The cyclist is wearing a dark jersey, shorts, and a backpack. The road has a white guardrail on the left and a rocky embankment on the right. In the background, there are rolling hills and mountains under a clear sky. The word "Fearless" is written in a large, bold, black serif font across the center of the image, slightly overlapping the cyclist.

Hubs

24-hole Ratchet 36
Front:12*100 Rear:12*142

Internal Width

21 mm

Spokes

Straightpull Bladed 2.3

“The Windbreaker's Silent Oath”

At this moment, he pedaled the “Subjugate” wheelset, as silent as obsidian, but in the wind to draw a line like a string moon.

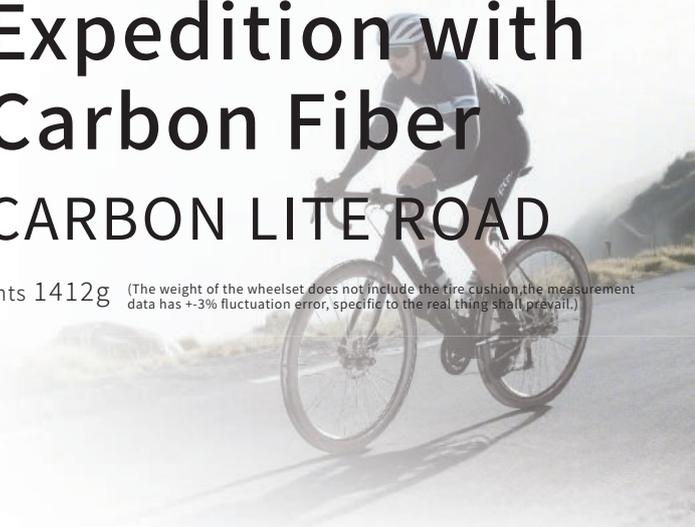

“Subjugate” takes the fear out of riding, makes gravel roads as stable as tracks, and makes every bend a medal in your taming of the world. Conquest is not about crushing mountains, it's about making the wind your willing second-in-command.

Expedition with Carbon Fiber CARBON LITE ROAD

Weights 1412g (The weight of the wheelset does not include the tire cushion, the measurement data has +-3% fluctuation error, specific to the real thing shall prevail.)

CARBON SPOKES

“Carbon as a wing to harness the unknown”

Every adventure is a whisper of the wind. The “Expedition. Carbon monoxide” wheelset is forged from carbon fiber, lightweight but not lacking in rigidity, just like a sharp blade that can break the wind. The weight is as low as dust, but it can hold up the wild thoughts of the mountains. It is not only a visual medal, but also a declaration of craftsmanship; the precise tension of the spokes and the coordination of the bearings make every power stroke a silent gallop.

From the asphalt highway to the gravel trail, it is like a silent guide, the flexibility of carbon fiber dissolves the bumps, and the tough wheel frame locks the efficiency. The so-called “carbon display” allows technology to be seen and the courage of the explorer to be seen. When the wheel rolls over an unknown curve, it becomes a light in your shadow.

A person wearing a black helmet, sunglasses, and a black t-shirt is riding a mountain bike through a desert canyon. The rider is leaning forward, and the bike is kicking up a cloud of dust. The background consists of rugged, layered rock formations under a clear blue sky. The overall scene is dynamic and adventurous.

“The ultimate craftsmanship, forging a majestic gateway to the cycling world”

Originating from the Great Wall, the backbone of China, the “Great Wall” wheelset interprets the cycling spirit of never compromising with hardcore performance. Designed for gravel roads, muddy trails and rugged mountains, it features highly rigid carbon fiber rims and an optimized spoke layout for a lightweight yet tough ride. Whether it's a gravel-splattered curve or a realistically soft and complex road surface, it can handle it with ease. As reliable as a Great Wall, as agile as a fire engine. Redefining the all-round boundary of the melon car, I wish you to break through the shackles of the terrain and leave a fearless track in the unknown journey.

Kirin AERO LITE ROAD

Weights 1475g (The weight of the wheelset does not include the tire cushion, the measurement data has +-3% fluctuation error, specific to the real thing shall prevail.)

“The wind blows, the wheel sets the world in motion.”

Derived from the Oriental Kirin, it is the “Wheel of the Beast” in the road cycling world with its exquisite craftsmanship. At highway speeds, it transforms into the “Wind Whisperer”, like the Kirin stepping on fire. The appearance simulates the Kirin's hooves and armor, and crushes gravel roads as if they were flat. The wheelset is a symbol of the rider's power to harness the power of auspiciousness. When the rider is speeding, the wheelset is transformed into a flaming golden pattern, just like the unicorn spitting out a book to send blessings to you, wishing you to conquer every journey. It is a totem of Chinese ingenuity and the pinnacle of art on wheels.

A cyclist in a white jersey and black shorts is riding a road bike on a paved road that curves through a mountainous, forested landscape. The scene is bathed in bright, hazy sunlight, creating a soft, ethereal atmosphere. The cyclist's shadow is cast on the road surface. The background shows steep, rocky slopes and dense evergreen trees.

CARBON SPOKES

“The Wind is my Pen, and the Dust is my Wing”

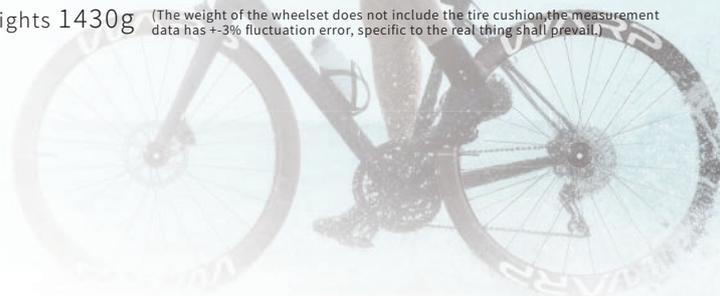

“The dust of the wind” is more than just a wheelset, it's a kind of wind-breaking art. Like the footprints of the wind sweeping across the wilderness, the patterns on the rims are carved by the sharp edges of the wind, taming the air into a force that pushes us forward. Each line is a metaphor for speed, spinning like dust and smoke, outlining the shape of the wind in light and shadow. We use aerospace-grade carbon fiber to forge a lightweight skeleton, with precisely woven spokes for tension, so that every pedal becomes a silent conversation with the wind - not afraid to get tangled up against the wind, just to take you to a farther place when the dust settles. Fast and poetic.

Crescent moon spring AERO LITE ROAD

Weights 1430g (The weight of the wheelset does not include the tire cushion, the measurement data has +3% fluctuation error, specific to the real thing shall prevail.)

Spokes

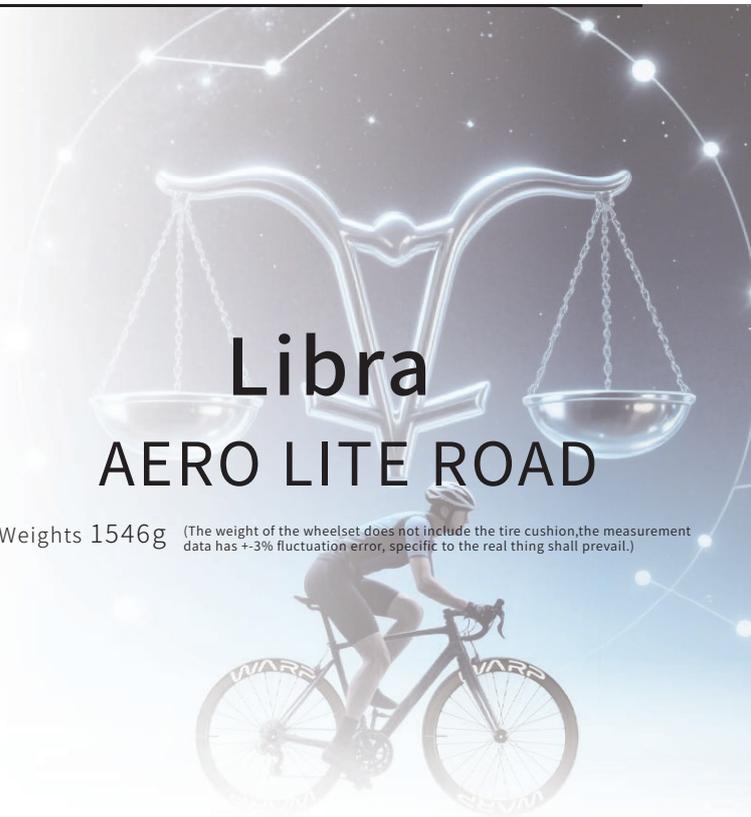

Straightpull Bladed 2.3

“Walking on the wind,
shining with the moon”

The “Crescent Moon” combines the beauty of nature with speed. The design of the hub is unique, with a crescent-like skeleton structure that creates fluid light and shadow during revolutions, realizing extreme lightness and ultra-low wind resistance, and unique bearings that bring a silky smooth transmission experience. When the wind breaks, it is like a gust of wind sweeping across a lake, and when it climbs, it conquers gravity with its rigidity, making the arena a stage of poetry and power with every revolution.

Libra

AERO LITE ROAD

Weights 1546g (The weight of the wheelset does not include the tire cushion, the measurement data has +/-3% fluctuation error, specific to the real thing shall prevail.)

*“Accurate as a scale,
Riding the wind like a poem”*

Derived from the starry constellation of Libra, it demonstrates the beauty of balance with exquisite craftsmanship. Every gram of weight is carefully distributed like the orbit of a star; the aerodynamic spokes are designed to break the wind and find a balance between speed and stability.

Whether it's tough on climbs or powerful in sprints, the bike always rides with elegance, just like Libra's nature of pursuing harmony. This is not a set of parts, but a tacit understanding between the rider and the universe - a game of gravity and buoyancy in every pedal stroke.

Butted 2.0/1.8

“Conquer the mountains with wildness”

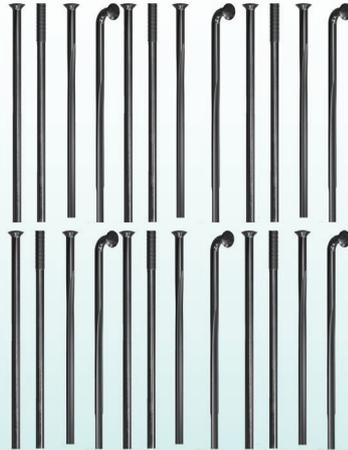

The “Wolf Claws” MTB wheelset is designed to conquer the rugged mountains. The high-strength carbon fiber rims are as sharp and tough as a wolf’s claw, while the lightweight design enhances explosive power and rock-solid stability in complex terrain. Dynamic Balance technology ensures smoothness at high speeds and enhances torsional rigidity, making every step aggressive. Whether it’s a steep sprint or a muddy detour, the “Wolf Claws” lets you tear up the track with its silent wildness, making cycling a game with nature - no compromise means victory.

The image features a white background with numerous horizontal bars of various colors (yellow, blue, purple, pink, teal, orange) scattered across the frame. A central black-bordered rectangle contains the text "COLORFUL YOUR LIFE" in a bold, black, sans-serif font.

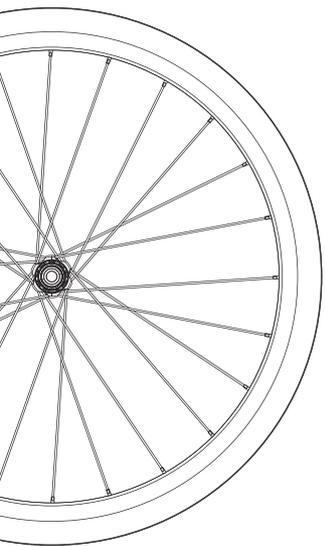

COLORFUL YOUR LIFE

COLORFUL YOUR LIFE

"WARP" can meet all kinds of riding needs, the hubs are made of good bearings, which are very smooth and durable. Hat spokes have many styles, good looking and practical. Various styles of wheelsets can be matched, full range, accurate specifications. Provide stable support for your bike, but also make your bike more personalized and more enjoyable to ride!

We Are Ready to Proceed!
